

INTERACTIVE AI CONVERSATION PARTNERS FOR BUSINESS

Talk to AI. Live.

A character that listens, responds and helps get things done.

We give AI systems a face.

We design characters that customers and employees can talk to live, using their voice. The avatar draws on your company's knowledge to answer questions and follow-up questions - it does not play a prerecorded video.

Avatar on a kiosk screen.
Application visualisation.

WHAT YOU GET

A conversation partner tailored to your brand.

Character and personality. Voice and conversational style. A knowledge base. An agreed operating scenario. Integrations selected for your project.

Answers. And actions.

Once the necessary integrations are in place, the avatar can, for example, check availability, book an appointment or pass on a request.

Three roles. A clear goal.

For customers

Explains your offer and helps choose the right product.

For employees

Makes company knowledge accessible and helps employees learn procedures.

For your brand's audience

Welcomes visitors to your stand and guides them through your offer or exhibition.

More than words: voice, gaze, facial expression and gesture.

We develop non-verbal communication and design a calm conversational style. Support can be available 24/7. Languages and availability are agreed for each deployment.

Let's discuss a pilot project.
